

Enhanced Silver Series

Re-Lubeable Universal Joints

Neapco is proud to present our enhanced "Silver Series" line of light and medium duty universal joints. Field tested, these improved *premium quality* universal joints are designed by Neapco and manufactured to Neapco specifications ensuring superior fatigue life. The re-lubeable feature makes these u-joints an excellent choice for 4x4 and extreme duty applications. Our enhanced offering is easily identified by the letters NP on the journal body.

Enhanced Features & Benefits:

- 1** Journal trunnion improvements include a precision ground radius and rigid tolerances on the ground trunnion diameter. These new features provide improved fatigue life and superior balance capability.
- 2** Journal is made from high alloy, impact resistant steel. Journal hardness, case depth and core hardness is tightly controlled for improved strength and durability.
- 3** Bearing races are ground on the inner diameter to minimize backlash and to promote longer life.
- 4** The outer diameter of the bearing races are precision ground to insure a precise fit in the mating cross-holes. Bearing races are heat treated on all surfaces, and case depths and surface hardness is tightly controlled to ensure superior wear resistance.
